Wisconsin research cost report

Route-scenario economic update | November 14, 2026
Redacted demonstration edition. LOGiMIX by Sunnyday Technologies LLC, powered by CEMFORGE.

Report section	What the private report provides
Specialty pricing	Dated package-price references carried forward; no new ingredient substitution. Supplier identities and amounts withheld.
Wisconsin comparison	Separate material, delivery and processing scenarios for the priced study areas. Candidate sand-yard routes revise modeled delivery; La Crosse remains unpriced.
Scale and operations	Project-size sensitivity, operating assumptions and package-versus-consumption accounting.
Research status	Economic update only. No new inference, physical testing or structural design.

This sample shows the report structure. Cost values, quantities, product identities and supplier details are removed from the document content, not covered by visual overlays.

To discuss the private report, arrange a Teams or Zoom walkthrough through info@sunn3d.com.

This sample follows the updated private route-scenario report. It does not reveal supplier identities, cost values or formulation quantities.

Regional cost comparison

Regional comparison structure. Numeric inputs and outputs are withheld; the private edition states its project mass and unit basis.

Study area / ZIP	Materials	Delivery	Processing	Modeled subtotal
Appleton	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]
Green Bay	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]
Madison	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]
Milwaukee	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]
La Crosse	Unpriced	Unknown	Not totaled	Unavailable

Modeled subtotals are conditional planning estimates, not complete delivered quotations. Unknown preparation, taxes and accessorials are excluded.

Candidate sand-yard road distances revise delivery assumptions. Branch stock, grade and price applicability remain unverified. Material prices, quantities and processing are retained from the prior economic edition; no physical performance qualification is supplied.

Project scale and operating assumptions

Project-size sensitivity structure. Scenario masses, hours, costs and package counts are withheld.

Project lb	Hours	Processing	Delivery	Modeled subtotal	Packages
Small	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]
Medium	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]
Reference	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]
Large	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]	[WITHHELD]

The private report separates assumed equipment allocation, labor, energy, routine QA and delivery across project sizes. It avoids duplicate blending or equipment charges.

Delivery scenarios distinguish retained cement routes, candidate sand-yard routes and assumed specialty haul. Actual dispatch, truck restrictions, specialty consolidation and freight charges remain unconfirmed.

Operating hours do not establish construction schedules or printing crew requirements. Package purchase cash differs from material consumption; leftover inventory is accounted for separately.

Verified specialty package references

The private sourcing reference binds observed package selections to dated price evidence. Supplier identities, SKUs, package quantities and prices are withheld.

Reference group	Evidence	Price / quantity
Powder admixture	Observed package options	[WITHHELD]
Mineral additions	Observed package options	[WITHHELD]
Other required modifier	Sourcing gap retained	Unknown

Supplier price observations are carried forward from the prior edition, not refreshed quotations. Alternative mineral products are not interchangeable or automatically substituted. No claim is made that one supplier provides every required ingredient.

Package labeling, actual stock, delivered costs and compatibility need confirmation before procurement.

Source evidence and qualification gaps

The report separates observed prices, retained historical inputs and planning assumptions.

Evidence layer	Remaining limitation
Product prices	Observed listings; not guaranteed stock or delivered quotes.
Delivery and branch linkage	Candidate routes do not verify stock, grade or branch-price applicability. Dispatch, pickup, destination freight and accessorials require confirmation.
Technical compatibility	Exact grade and lot performance require material-specific testing.
Climate and structures	No new climate validation, structural capacity or wall design.
Next Wisconsin step	Confirm sourcing and qualify materials before project-specific use.

Research decision support only. Estimates are not measurements, guarantees or construction instructions. The economic update does not revalidate earlier technical predictions.

The private report aligns with the current route-scenario map. This publication date does not make every underlying price current. Missing local material inputs remain unpriced.
